THE PROJECT

Planning solutions

Exposanità is the point of reference for **professionals** and **companies** from the **healthcare** and **socio-medical world**. Whether focusing on skill development or seeking market solutions, this event provides an ideal opportunity for **exchanging knowledge** and engaging with **technological innovations**. We promote the **meeting** between **institutions, professions, and companies** to plan together the future of the healthcare and respond to the critical issues that characterise the sector.

Exposanità acts as an ideal **fil rouge** linking the **players in the sector**. It allows them to **design those solutions** that are needed to **improve** our **health and care services**. In this context, the 2025 communication campaign, "Exposanità Planning Solutions," illustrates the exhibition as a connector and a valuable tool for developing solutions aimed at creating a **universal, effective, and efficient healthcare system**.

On the next edition

The 2026 edition of Exposanità will be dedicated to **new technologies as an indispensable tool**, along with human resources, to guarantee the quality and resilience of the NHS.

The adoption of **digital technology** in its **clinical and organisational applications and the redefinition of care environments** will be the central themes of next edition. As well as the **empowerment of professionals and patients** in the management of **non-self-sufficiency**. **Disability solutions** and **rehabilitation pathways** will complete the range of tools for independent living.
